# Snagging List

Sanjeev – Customer

1. When you search for a customer, the booking table, does the cost pull it in from the Bill class?

2. When you search via reg you still have it by name – maybe have that table as name and reg so you can have the same layout for both search options

3. What is the use of showing the customer ID when you are on the main customer page (when you click it from the main menu)
   Remove that column and make the email and phone number columns larger so you can see all of the information

4. Move the Individual and Business radio buttons further apart – add a label to describe what they do

5. Change buttons to just Add, Save and Delete to match the other screens

6. Implement the bank holiday blocking out for when you are adding a customer and a booking

7. When you add a new customer, line up the warranty part the pops up to be underneath the booking (it's a cosmetic thing)

8. When you delete a customer does it delete all related vehicles, bookings and parts?

9. On the main customer screen make sure all of the buttons are the same width (cosmetic)

10. When you search for a customer, make the label 'Customer Details' the same size as the other
    Move that whole section to the left so that you can make the labels longer to fit in the longer info (email / address)

11. When adding a new customer, change the save button to lowercase letters (cosmetic)

12. On the main customer screen possibly stack the Business and Individual radio buttons (on the left) one on top of the other (cosmetic)

Ismail – Booking

1. The 'Show Next Bookings Per Vehicle' button – what does it do? Why is it so big? Get a NullPointerException when clicking it

2. When clicking the 'Complete' button on the complete booking screen, getting a 'Database locked' error

3. When does the total cost get generated an appear?

4. Make it clear when you are making a booking that you have to enter the full registration number

5. Implement a check to make sure the end time is after the start time?

6. One the 'Create booking' make the start and end time columns smaller to make the mechanic one larger so you can see all of the information (cosmetic)

7. Change label from Spawn booking – I know you like it but it should be 'Save' so that it matches the other screens

8. The initial booking screen – it shows all past and future bookings – maybe sort it so that it is in chronological order

9. Same for the filtering by month, day, hour – show them in chronological order?

10. One the main Booking page change the label that says 'Vehicle Registration' to just 'Registration' (cosmetic)

11. One the main booking page table change the column header to Registration so it can be made smaller so you can make Mechanic larger so you can see all of the text (cosmetic)

12. When searching for a booking do you need to show the overall cost and if it has been settled or not?

13. When you have searched for a booking, display the information as labels to make it clear that they are not editable – also matches with other screens? (cosmetic)

Dorota – Parts

1. On the main Parts screen make sure that all of the buttons are the same size (cosmetic) – some are overly large when they don't need to be

2. In the Part Type table take out the 'Description' column so that you can make name larger (description will show up when you click on it)

3. On the main parts screen move the buttons down (Delete and clear) to give you more space to leave between the textboxes – there is a different amount of space between them all

4. Do you make use of the 'Warranty Expired' column in the database
   If you don't use it, remove it from your database and remove it from this query (line 234)

5. The show used part button is not working

6. The 'Save changes' button doesn't always disappear when you haven't got a part selected – when you clear it disappears but when you haven't selected anything to start with it is there

7. Possible switch the layout of the complete booking screen – when you are adding the parts
   On the RHS, have the part by type above the selected parts (cosmetic)

8. Move the save to booking button to the bottom right – helps with the flow for the user

9. Add selected not working – should update the database and take you back to the complete booking screen

10. When you add a part to a booking, get the parts in stock level to decrease

11. When you remove a part from a booking, get it to increment back in the stock level table

12. The add stock screen is a bit bare – maybe have the stock list table there
    Doesn't need to be editable – just to fill the space

13. What is the use of the 'Go Back' button – possibly remove as you can go back by clicking on the 'Parts' button at the top

14. On the add stock screen, make sure that all of the textboxes are the same width

15. When you have searched for a part change the 'Parts' information to be shown in labels to make it clear you cannot edit it and to match with the other half of your screen (Customer and Vehicle) – cosmetic

Amy – Vehicle

1. Implement the bank holiday blocking out

2. On the main vehicle screen, get the warranty heading to disappear along with the warranty textboxes

3. When adding a vehicle, move the warranty boxes up slightly to be closer to the booking section

4. Change the save button to lowercase letters

5. Change which templates comes up depending on the classification selected

Authentication

1. Change the login screen text – make it more professional

2. Reduce the Is Admin and Is Mechanic columns and make the name one larger

3. When you successful delete a user, give a confirmation of this

4. The add user screen is bare – include a table of all current users so the person operating can check they are not duplicating?

5. Change the save button to lowercase letters when adding a user

6. Spread out the textboxes on the main user screen to match the length of the table?
